This public inquiry report into serious failings in healthcare that took place at the Mid Staffordshire NHS Foundation Trust builds on the first independent report published in February 2010 (ISBN 9780102964394). It further examines the suffering of patients caused by failures by the Trust: there was a failure to listen to its patients and staff or ensure correction of deficiencies. There was also a failure to tackle the insidious negative culture involving poor standards and a disengagement from managerial and leadership responsibilities. These failures are in part a consequence of allowing a focus on reaching national access targets, achieving financial balance and seeking foundation trust status at the cost of delivering acceptable care standards. Further, the checks and balances that operate within the NHS system should have prevented the serious systemic failure that developed at Mid Staffs. The system failed in its primary duty to protect patients and maintain confidence in the healthcare system. This report identifies numerous warning signs that could and should have alerted the system to problems developing at the Trust. It also sets out 290 recommendations grouped around: (i) putting the patient first; (ii) developing a set of fundamental standards, easily understood and accepted by patients; (iii) providing professionally endorsed and evidence-based means of compliance of standards that are understood and adopted by staff; (iv) ensuring openness, transparency and candour throughout system; (v) policing of these standards by the healthcare regulator; (vi) making all those who provide care for patients , properly accountable; (vii) enhancing recruitment, education, training and support of all key contributors to the provision of healthcare; (viii) developing and sharing ever improving means of measuring and understanding the performance of individual professionals, teams, units and provider organisations for the patients, the public, and other stakeholders.

Although much of the hubris and hyperbole surrounding the 1990's Internet has softened to a reasonable level, the inexorable momentum of information growth continues unabated. This wealth of information provides resources for adapting to the problems posed by our increasingly complex world, but the simple availability of more information does not guarantee its successful transformation into valuable knowledge that shapes, guides, and improves our activity. When faced with something like the analysis of sense-making behavior on the web, traditional research models tell us a lot about learning and performance with browser operations, but very little about how people will actively navigate and search through information structures, what information they will choose to consume, and what conceptual models they will induce about the landscape of cyberspace. Thus, it is fortunate that a new field of research, Adaptive Information Interaction (AII), is becoming possible. AII centers on the problems of understanding and improving human-information interaction. It is about how people will best shape themselves to their information environments, and how information environments can best be shaped to people. Its roots lie in human-computer interaction (HCI), information retrieval, and the behavioral and social sciences. This book is about Information Foraging Theory (IFT), a new theory in Adaptive Information Interaction that is one example of a recent flourish of theories in adaptationist psychology that draw upon evolutionary-ecological theory in biology. IFT assumes that people (indeed, all organisms) are ecologically rational, and that human information-seeking mechanisms and strategies adapt the structure of the information environments in which they operate. Its main aim is to create technology that is better shaped to users. Information Foraging Theory will be of interest to student and professional researchers in HCI and cognitive psychology.

Intercourse is a book that moves through the sexed world of dominance and submission. It moves in descending circles, not in a straight line, and as in a vortex each spiral goes down deeper. Its formal model is Dante's Inferno; its lyrical debt is to Rimbaud; the equality it envisions is rooted in the dreams of women, silent generations, pioneer voices, lone rebels, and masses who agitated, demanded, cried out, broke laws, and even begged. The begging was a substitute for retaliatory violence: doing bodily harm back to those who use or injure you. I want women to be done with begging. The public censure of women as if we are rabid because we speak without apology about the world in which we live is a strategy of threat that usually works. Men often react to women's words - speaking and writing - as if they were acts of violence; sometimes men react to women's words with violence. So we lower our voices. Women whisper. Women apologize. Women shut up. Women trivialize what we know. Women shrink. Women pull back. Most women have experienced enough dominance from men - control, violence, insult, contempt - that no threat seems empty. Intercourse does not say, forgive me and love me. It does not say, I forgive you, I love you. For a woman writer to thrive (or, arguably, to survive) in these current hard times, forgiveness and love must be subtext. No. I say no. Intercourse is search and assertion, passion and fury; and its form - no less than its content - deserves critical scrutiny and respect.---- PREFACE

Traces the development of the 1996 Ford Taurus, and describes the interactions between designers, engineers, marketers, accountants, and manufacturing staff

The U.S. Navy is ready to execute the Nation's tasks at sea, from prompt and sustained combat operations to every-day forward-presence, diplomacy and relief efforts. We operate worldwide, in space, cyberspace, and throughout the maritime domain. The United States is and will remain a maritime nation, and our security and prosperity are inextricably linked to our ability to operate naval forces on, under and above the seas and oceans of the world. To that end, the Navy executes programs that enable our Sailors, Marines, civilians, and forces to meet existing and emerging challenges at sea with confidence. Six priorities guide today's planning, programming, and budgeting decisions: (1) maintain a credible, modern, and survivable sea based strategic deterrent; (2) sustain forward presence, distributed globally in places that matter; (3) develop the capability and capacity to win decisively; (4) focus on critical afloat and ashore readiness to ensure the Navy is adequately funded and ready; (5) enhance the Navy's asymmetric capabilities in the physical domains as well as in cyberspace and the electromagnetic spectrum; and (6) sustain a relevant industrial base, particularly in shipbuilding.

Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.
