Unit 3: Skeletal System | Human Anatomy Quiz - Quizizz

Define bone, cartilage, and the skeletal system. List and describe the functions of the skeletal system. Bone, or osseous tissue, is a hard, dense connective tissue that forms most of the adult skeleton, the support structure of the body. In the areas of the skeleton where bones move (for example, the ribcage and joints), cartilage, a semi-rigid form of connective tissue, provides flexibility and smooth surfaces for movement.
