Sector Area = $\frac{\theta}{360} \cdot \pi r^2$ = $\frac{\theta}{2} \cdot r^2$ The same method may be used to find arc length - all you need to remember is the formula for a circle's circumference. Special cases: area of semicircle, area of quadrant Finding the area of a semicircle or quadrant should be a piece of cake now, just think about what part of a circle they are!

Sector Area Calculator

Calculate the arc length according to the formula above: $L = r \cdot \theta = 15 \cdot \frac{\pi}{4} = 11.78$ cm.

Calculate the area of a sector: $A = \frac{\theta}{2} \cdot r^2 = \frac{\pi}{4} \cdot 15^2 / 2 = 88.36$ cm². You can also use the arc length calculator to find the central angle or the circle's radius.

Arc Length and Area of a Sector Worksheets

Arc Length and Sector Area. The length of an arc on a circle of radius is equal to the radius multiplied by the angle subtended by the arc in radians. Using s to denote arc length we have $s = r\theta$. This should actually be intuitive since the arc length on the unit circle is equivalent to the angle in radians.

A circle's sector has an area of 108 cm^2 , and the sector intercepts an arc with length 12 cm . Find the diameter of the circle. They've asked me for the diameter. The formulas I've learned use the radius. But I can find the radius, and then double it to get the diameter, so that's not a problem.

Sectors, Areas, and Arcs | Purplemath

1. The area of the shaded region is equal to the area of the triangle subtracted from the area of the sector. Begin by finding each of these areas. To find the area of the sector you can either use the formula for sector area or view the sector as some part of the total area of the circle. By formula: $A = (1/2)(r^2)(\theta)$ $A = (1/2)(6^2)(\pi/3) = 6\pi$
