Degradation, dehumanization, instrumentalization, humiliation, and nonrecognition – these concepts point to ways in which we understand human beings to be violated in their dignity. Violations of human dignity are brought about by concrete practices and conditions; some commonly acknowledged, such as torture and rape, and others more contested, such as poverty and exclusion. This volume collates reflections on such concepts and a range of practices, deepening our understanding of human dignity and its violation, bringing to the surface interrelationships and commonalities, and pointing to the values that are thereby shown to be in danger. In presenting a streamlined discussion from a negative perspective, complemented by conclusions for a positive account of human dignity, the book is at once a contribution to the body of literature on what dignity is and how it should be protected as well as constituting an alternative, fresh and focused perspective relevant to this significant recurring debate. As the concept of human dignity itself crosses disciplinary boundaries, this is mirrored in the unique range of perspectives brought by the book’s European and American contributors – in philosophy and ethics, law, human rights, literature, cultural studies and interdisciplinary research. This volume will be of interest to social and moral philosophers, legal and human rights theorists, practitioners and students.
This book is open access under a CC BY license. This book offers a unique and insightful analysis of Western and Middle Eastern concepts of dignity and illustrates them with examples of everyday life. Dignity in the 21st Century - Middle East and West is unique and insightful for a range of reasons. First, the book is co-authored by scholars from two different cultures (Middle East and West). As a result, the interpretations of dignity covered are broader than those in most Western publications. Second, the ambition of the book is to use examples from everyday life and fiction to debate a range of dignity interpretations supplemented by philosophical and theological theories. Thus, the book is designed to be accessible to a general readership, which is further facilitated because it is published with full open access. Third, the book does not defend one superior theory of dignity, but instead presents six Western approaches and one based on the

Koran and then asks whether a common essence can be detected. The answer to the question whether a common essence can be detected between the Koranic interpretation of dignity and the main Western theories (virtue, Kant) is YES. The essence can be seen in dignity as a sense of self-worth, which persons have a duty to develop and respect in themselves and a duty to protect in others. The book ends with two recommendations. First, given the 7 concepts of dignity introduced in the book, meaningful dialogue can only be achieved if conversation partners clarify which variation they are using. Second, future collaborations between philosophers and psychologists might be helpful in moving theoretical knowledge on dignity as a sense of self-worth into practical action. The "scourges" of a sense of self-worth and dignity are identified by psychologists as violence, humiliation, disregard and embarrassment. To know more about how these can be avoided from psychologists, is helpful when protecting a sense of self-worth in others.

In Cognitive Kin, Moral Strangers?, Judith Benz-Schwarzburg investigates whether non-human animals share complex socio-cognitive abilities like culture, language and theory of mind with humans. She questions our supposedly human uniqueness and explores how cognitive kinship matters for animal ethics.

Adopting an interdisciplinary perspective, this volume explores the reality of the principle of human dignity – a core value which is increasingly invoked in our societies and legal systems. This book provides a systematic overview of the legal and philosophical concept in sixteen countries representing different cultural and religious contexts and examines in particular its use in a developing case law (including of the European Court of Human Rights and of the Inter-American Court of Human Rights). Whilst omnipresent in the context of bioethics, this book reveals its wider use in healthcare more generally, treatment of prisoners, education, employment, and matters of life and death in many countries. In this unique comparative work, contributing authors share a multidisciplinary analysis of the use (and potential misuse) of the principle of dignity in Europe, Africa, South and North America and Asia. By revealing the ambivalence of human dignity in a wide range of cultures and contexts and through the evolving reality of case law, this book is a valuable resource for students, scholars and professionals working in bioethics, medicine, social sciences and law. Ultimately, it will make all those who invoke the principle of human dignity more aware of its multi-layered character and force us all to reflect on its ability to further social justice within our societies.

Volume 2 of the Textbook of Neural Repair and Rehabilitation stands alone as a clinical handbook for neurorehabilitation.

This annual report is a call to action to recognize the things that are having an impact on the internet today, and to embrace the notion that we as humans can change how we make money, govern societies, and interact with one another online. We invite you to participate in setting an agenda for how we can work together to create an internet that truly puts people first. This book is neither a country-level index nor a doomsday clock. Our intention is to show that while the worldwide consequences of getting things wrong with the internet could be huge - for peace and security, for political and individual freedoms, for human equality - the problems are never so great that nothing can be done. More people than you imagine are working to make the internet healthier by applying their skills, creativity, and personal bravery to business, technology, activism, policy and regulation, education, and community development.
