Profiting from China without getting burned is currently an obsession with the international investment community. The estimated size of the Chinese economy has just been revised upwards, making it the 4th largest in the world behind the US, Japan and Germany, and ahead of the UK but the idea that investing in China is a sure-fire, get-rich-quick investment story is dangerously misleading. * The author of the bestselling Investment Biker, Adventure Capitalist, and Hot Commodities, is providing a book that provides a window into what will soon be the most vital, most lucrative market of our time: China. * While the Chinese economy has had an annual average growth of 9.4 percent since 1978, and despite the ongoing speculation about China's future, its stock market is now emerging from a six-year low. * As the Chinese economy continues to lumber toward a free market system - and as the Chinese government inevitably unpegs its currency and opens its stock market to more foreign investment, Rogers foresees an abundance of opportunities for investors. * In this book, he shows readers not only how to take advantage of China's coming dominance - what, where, how, and when to buy - but how China will impact individual companies, markets, and economies around the world. * "Nobody with blue eyes has ever made money investing in China," the old saying goes. Jim Rogers aims to disprove this adage. Jim Rogers co-founded the Quantum Fund and retired at age 37. Since then, he has served as a sometime professor of finance at Columbia University's business school, and as a media commentator. * Reappears twice a week on Fox Business News, and is the author of three immensely successful books.

Today's financial landscape and what Wall Street doesn't want you to know Rigged Money is based on one simple truth: Wall Street needs money from Main Street, not the other way around. The financial industry has convinced the general public that investing across different asset classes is the only way to protect wealth, but this is an outdated rule that no longer applies. Since asset classes - small caps, large caps, international investments, gold, and bonds - now overlap when it comes to risk and volatility parameters, the diversification effect is gone. That's exactly what Wall Street doesn't want you to know: that the rules of the game have changed. Risk isn't constant: Pie charts lie when it comes to accurately describing the risk of stocks and bonds. Dividends Are No Silver Bullet: They are designed to entice investors rather than to increase a company's value or your net worth. Buy and Hold is Dead: The financial world (and all the companies and securities in it) moves too quickly and is changing too often for this theory to hold true today. Gold is Not an Investment: Gold is today's currency of fear, and this fear is driven by escalating government debt. An unflinching look at this new financial world, Lee Munson's Rigged Money arms today's investors with the simple, smart, and clear advice needed to level the playing field.

Investing legend Warren Buffett once said that "success investing doesn't correlate with I.Q. once you're above the level of 125. Once you have ordinary intelligence, what you need is the temperament to control the urges that get other people into trouble in investing." In an attempt to understand exactly what kind of temperament Buffett was talking about, Ronald W. Chan interviewed 12 value-investing legends from around the world, learning how their personal background, culture, and life experiences have shaped their investment mindset and strategy. The Value Investors' Lessons from the World's Top Fund Managers is the result. From 106-year-old Irving Kahn, who worked closely with father of value investing Benjamin Graham and remains active today, and 95-year-old Walter Schloss (described by Warren Buffett as the "super-investor from Graham and Doddsville"), to the co-founders of Hong Kong-based Value Partners, Cheah Cheng Hye and V-Nea Yeh, and Francisco Garcia Paramés of Spain's Bestinvest Asset Management, Chan chose investment luminaries to help him understand the international appeal - and success - of value investing. All of these men became strong advocates of the approach despite considerable age and cultural differences. Chan finds out why. In The Value Investors, readers will also discover how these investors, each of whom has a unique value perspective, have consistently beaten the stock market over the years. Do they share a trait that allows this to happen? Is there a winning temperament that turns the ordinary investor into an extraordinary one? This book answers these questions and more.

Master's Thesis from the year 2016 in the subject Business economics - Investment and Finance, grade: 1.6, TU Dortmund, language: English, abstract: The Middle East countries Iran, Iraq and Saudi Arabia that were analyzed for investment potentials possess natural energy resources in copious amounts, share a high dependency on oil or gas while renewables barely play any role and have strong religious tendencies in politics as well as differences compared to western countries when it comes to aspects of cultural, religion, understanding and business practices. The most promising investments that were stated out are: LNG liquefaction facility in Iran, since Iran has large natural gas reserves and production capacities, but doesn't export gas at all. PV modules for Iraq, since expensive projects are comparably risky in this country and some of the population has no or just limited access to electricity - the demand exceeds the supply. For Saudi Arabia, larger scale solar power plant projects like Parabolic Troughs are most promising, since Saudi Arabia is very dependent on oil and has a very high carbon dioxide emission and a weak energy diversity. Especially the liquefaction facility in Iran seems to have enormous potential on the long run. The implementation of PV in Iraq is highly dependent on the business model and governmental support. Such support is also needed for the solar power plant in Saudi Arabia, since the electricity prices are subsidized in a way, that the electricity generated through a Parabolic Trough would most likely be not competitive without any form of support. However, such support is very beneficial for Saudi Arabia and huge investments in the energy sector are planned anyways. For the further realization of such projects its mandatory to make a sophisticated economic and feasibility analysis that considers all the relevant variables and more specific information and data. But especially renewable energies which are massively underrepresented in the Middle East seem to have a good potential which will probably increase further since more experience and better technologies are achieved. The Middle East is a region with large natural resources and therefore with a theoretically enormous amount of investment possibilities. However, big players, state-owned companies, restrictions and difficulties regarding law, culture and business practices can overall decrease the attractiveness of investments in this area.

Global investing isn't new. In fact, investors have been looking to overseas markets for hundreds of years, and with good reason. A global portfolio can bestow innumerable rewards on the savvy investor, yet many US investors remain woefully under-exposed to foreign equities. Despite the fact that US equity markets make up less than half of world markets, only a small portion of our investment dollars are allocated overseas. Even the most sophisticated investors have been deterred by misconceptions about the risks associated with owning foreign stocks or a lack of information about foreign markets. But the notion investment options are limited by borders is antiquated and downright detrimental to successful investing. Once considered the playground of only the ultra-rich or institutional investors, global investing is fast becoming not only possible, but a necessity, for every investor. As part of Fisher Investments Press, Own The World introduces readers to the vast advantages of seeking investment opportunities all over the planet. Own The World provides investors with tools to build a global portfolio and points out potential hurdles to avoid. It also educates readers on the nuts and bolts of foreign markets, how to easily understand them, and vehicles for investing there. By detailing the vast and currently underappreciated benefits of global investing and the distinct advantages of a global approach, as well as common pitfalls to avoid, Own The World can help readers to tread more confidently into global markets as they look to optimize their investment results.

Robert Lucas is known among economists as one of the most influential macroeconomists of recent times - a reputation founded in no small part on the critical thinking skills displayed in his seminal 1990 paper 'Why Doesn't Capital Flow from Rich to Poor Countries?' Lucas's paper tackles a puzzle in economic theory that has since come to be known as the 'Lucas paradox,' and it deploys the author's brilliant problem-solving skills to explain why such an apparent paradox in fact makes sense. Classical economic theory makes a simple prediction of how capital flows between countries: it should, it states, flow from rich to poor countries, because of the law of diminishing returns on capital. Since poor countries have so little capital invested in them, the returns on new investment should be proportionally far better than investment in rich countries. This should mean that investors seeking new opportunities will invest in poorer countries, making capital consistently flow from rich nations to poorer ones. But, problematically, this is not in fact the case. Having defined the problem, Lucas did what any good problem solver would: he looked critically at the criteria involved, and offered a series of possible solutions. Indeed, in just six pages, he puts forward four hypotheses to explain the paradox's existence. The popularity of his paper, and the influence it has had, are also greatly magnified by careful reasoning embodied in Lucas's marshalling of evidence and his explanations of the judgements he has made.

The rewards of carefully chosen alternative investments can be great. But many investors don't know enough about unfamiliar investments to make wise choices. For that reason, financial advisers Larry Swedroe and Jared Kizer designed this book to bring investors up to speed on the twenty most popular alternative investments: Real estate, Inflation-protected securities, Commodities, International equities, Fixed annuities, Stable-value funds, High-yield (junk) bonds, Private equity (venture capital), Covered calls, Socially responsible mutual funds, Precious metals equities, Preferred stocks, Convertible bonds, Emerging market funds, Hedge funds, Leveraged buyouts, Variable annuities, Equity-indexed annuities, Structured investment products, Leveraged funds The authors describe how the investments work, the pros and cons of each, which to consider, which to avoid, and how to get started. Swedroe and Kizer evaluate each investment in terms of: Expected returns Volatility Distribution of returns Diversification potential Fees Trading and operating expenses Liquidity Tax efficiency Account location Role in an asset-allocation program Any investor who is considering or just curious about investment opportunities outside the traditional world of stocks, bonds, and bank certificates of deposit would be well-advised to read this book.
