Book Section 16 2

Section 16-2: Evolution as Genetic Change Natural selection on single-gene traits can lead to changes in allele frequencies and thus to evolution. Natural selection can affect the distributions of phenotypes in any of three ways: directional selection, stabilizing selection, or disruptive selection.

Foundation As Genetic

Two Types of Cells. There is another basic cell structure that is present in many but not all living cells: the nucleus. The nucleus of a cell is a structure in the cytoplasm that is surrounded by a membrane (the nuclear membrane) and contains, and protects, most of the cell's DNA. Based on whether they have a nucleus, there are two basic types of cells: prokaryotic cells and eukaryotic cells.
