solar system vocabulary chapter 25 beyond our Flashcards—
25.2 Stellar Evolution All stars, regardless of their size, eventually run out of fuel and collapse due to gravity. • Stars less than one-half the mass of the sun never evolve to the red giant stage but remain in the stable main-sequence stage until they consume all their hydrogen fuel and collapse into a white dwarf. Death of Low-Mass Stars

Chapter Solar System—jkaaser.com
708 Chapter 25 Protostar StageThe initial contraction spans a million years or so. As time passes, the temperature of this gaseous body slowly rises until it is hot enough to radiate energy from its surface in the form of long-wavelength red light. This large red object is called a protostar. A protostar is a developing star not yet hot
