Chapter 4: Tissue: The Living Fabric

Chapter 4: Tissue: The Living Fabric
Tissues = groups of cells that are similar in structure and perform a common function
Histology – use of microscope to examine structural features of tissue
o requires fixation (preserving), sectioning, and staining of tissue
o artifacts = minor distortions seen in tissue due to processing of tissue for examination
4 basic tissue types:

Tissue: The Living Fabric. 1 4.1

Tissue samples are fixed, sliced,
and stained for microscopy.

Histology: microscopic study of
tissues. The four main types
(groups) of tissues: Epithelial
Connective Muscle Nervous. 2 4.2

Epithelial tissue covers
body surfaces, lines cavities, and
forms glands. The defining or
unifying characteristics
of epithelial tissues: they are the
covering, lining and glandular
tissues.

Chapter 4 - Tissue: The Living Fabric - Review Questions ...

Groups of cells that are similar in structure and perform a common or related function. Four primary types: epithelial (covers), connective (supports), muscle (produces movement), and nervous (controls). All four types in most organs. Arrangements of tissues determine organs' structures and capabilities.
