This book focuses on ion mobility-
mass spectrometry (IM-MS) and
informatics approaches to
improve traditional analysis of

molecules by providing fundamentals and protocols for exploiting the potential of state-of-the-art IM-MS technology for the most common analytical applications. The chapters have been organized into four parts, each dealing with a particular set of IM-MS applications: 1) metabolomics and lipidomics; 2) proteomics and glycomics; 3) imaging and ambient ionization IM-MS; and 4) bioinformatic solutions for analyzing IM-MS data and deriving CCS values. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols,

and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Ion Mobility-Mass Spectrometry: Methods and Protocols* serves as an ideal resource for scientists delving into the technique's unprecedented analytical advantages, enabling novel qualitative and quantitative applications for the analysis of complex biological samples.

Biological processes that replicate, preserve and use the genetic information encoded in DNA must operate in the context of chromatin, a highly organized complex of DNA and proteins. These proteins do not merely package the DNA in the tiny volume of the nucleus, but impart

the structure the ability to change according to the requirements of the specific process the DNA is involved in. Moreover, chromatin structure is used by the cell to control the activity of DNA. In this volume the basics of chromatin structure and dynamics are presented by established experts in the field.

Storage Mass Spectrometry, quickly became the definitive reference in analytical laboratories worldwide. Revised to reflect scientific and technological advances and new applications in the field, the Second Edition includes new chapters covering: *

- * New ion trap instruments of high sensitivity
- * Peptide analysis by liquid chromatography/ion trap tandem mass spectrometry
- * Analytical aspects of ion trap mass spectrometry combined with gas chromatography
- * Simulation of ion trajectories in the ion trap

One additional chapter discusses the Rosetta mission, a "cometchaser" that was sent on a ten-year journey in 2004 to study the comet Churyumov-Gerasimenko using,

among other instruments, a GC/MS system incorporating a specially designed ion trap mass spectrometer. This comprehensive reference also includes discussions of the history of the quadrupole ion trap, the theory of quadrupole mass spectrometry, the dynamics of ion-trapping chemistry in the quadrupole ion trap, the cylindrical ion trap, miniature traps, and linear ion traps. Complete with conclusions and references, this primer effectively encapsulates the body of knowledge on quadrupole ion trap mass spectrometry. With its concise descriptions of the theory of ion motion and the principles of operation, *Quadrupole Ion Trap Mass Spectrometry, Second*

With contributions from a renowned team of specialists and researchers, this reference tracks the technologies, experimental studies, and international programs that will revolutionize and transform the world of vaccinology in the 21st century.

Most research and all publications in mass spectrometry address either applications or practical questions of procedure. This book, in contrast, discusses the fundamentals of mass spectrometry. Since these basics (physics, chemistry, kinetics, and thermodynamics) were worked out in the 20th century, they are rarely addressed nowadays and young scientists have no opportunity to learn them. This

book reviews a number of useful methods in mass spectrometry and explains not only the details of the methods but the theoretical underpinning.

The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia, in which groups of leading scientists from a range of topics across biology, chemistry and medicine assembled to present papers and discuss results. The Novartis Foundation, originally known as the Ciba Foundation, is well known to scientists and clinicians around the world.

Written by specialists in infectious diseases and gastroenterology, this edition features discussion on the many infections of the gastrointestinal tract faced by adult and pediatric populations. The text traces the historical and epidemiological aspects of these disorders and provides detailed discussions on diagnosis, treatment, prevention and control, and should be of interest to the infectious disease specialist, gastroenterologist, primary care provider, internist, paediatrician and surgeon.

Malaria is an infectious disease common to several parts of the

world, including Africa, northern South America, and Asia. During their service in the military, U.S. active members may be sent to any part of the world, including parts of the world where Malaria is an issue. In Liberia in 2003, for example, there was a 28 percent attack rate in Marines who spent a short time ashore, and half of the 80 Marines affected needed to be evacuated to Germany. This was not only costly to the U.S. military but dangerous as well. To fight against this disease, there exists a Malaria Vaccine program in the U.S. military. However, there exists a variety of potential vaccine targets for the most severe and important form of malaria; malaria from the species *Plasmodium falciparum*. Issues

also arise with the fact that there are three possible stages to create vaccines against-preerythrocytic, blood, or transmission. The Department of Defense (DoD), through the commanding general of the U.S. Army Medical Research and Materiel Command (USAMRMC), requested that the Institute of Medicine (IOM) conduct a programmatic review of the military Plasmodium falciparum malaria vaccine research and development program. There was to be a focus on vaccine against the preerythrocytic and blood stages. The IOM formed a committee of 11 experts with collective expertise in malaria vaccine research, parasite immunology, malarial biology,

clinical trials and regulatory affairs, industrial and public-sector vaccine development, biologic products research and development (vaccinology), military research and development programs, tropical medicine, and public health. The committee focused different tasks including determining whether the DoD malaria vaccine research and development program is scientifically sound and able to achieve the vaccine program objectives within specified timelines, recommending how to overcome significant, identified barriers, and identifying major strategic goals and timelines based on the material received and presentations made by the DoD's program representatives.
