Ephemerides Ephemeris For Year 1900 2100 Astrology

The Original 3,000 Year High-Precision Daily Astrological Online Ephemeris 600BC to 2400AD - Midnight GMT- with an Aspectarian included for Years 1900 to 2009 Help Make the Tools of Astrology

Astrology at the cutting edge. Raphael's - with its peerless reputation for accuracy - is the world leader among pocket Ephemerides. Now there is essential new data in three 51 year volumes. The new family members are Chiron, Lilith, Ceres, Pallas, Juno and Vesta. A Ready Reckoner also lends fresh accuracy to calculations. Today, astrologers are learning of new cosmic discoveries. With Raphaels, keeping track of them and the future everything is made simpler for you.

The World Ephemeris is the first computer calculated and typeset ephemeris with letter-quality printing. Now ease and clarity in reading is combined with accuracy and precision of data to provide the most complete and convenient ephemeris available for astrological calculation and analysis. The Sun's position is accurate to the second of arc; the Moon's mean Node and nine planetary positions are given to the minute of arc for every day of the 21st Century. One hundred and one years in all.

Available March 2008- the ultimate ephemeris for the years when all but the youngest among us were born. Neil F. Michelsen's The American Ephemeris for the 20th Century, 1900-2000 at Midnight became the most highly trusted and widely used reference work for astrologers worldwide. Now substantially revised, updated and expanded by Rique Pottenger, The New American Ephemeris for the 20th Century, 1900-2000 at Midnight, Michelsen Memorial Edition, has improvements and refinements that permit more accurate station times, a more accurate position for the Galactic Center and more. Ceres is added to daily longitude listings, Sun through Pluto, and monthly positions are provided for Eris, Chiron, Pallas, Juno and Vesta.

Derived using NASA's very latest laboratory ephemeris DE406/LE406, 'Raphael's 151-Year Ephemeris, 1900-2050' analyses the positions of the planets using half-day intervals, not one day intervals, for greater accuracy.

The Uranian Transneptune Ephemeris for 1900-2050 at Midnight is a specialty edition from the standard setting American Ephemeris series. Compiled and programmed by Neil F. Michelsen, it provides 150 years of positions in 5-day intervals for the Uranian Transneptunian points, or hypothetical planets, first identified by Alfred Witte and Fredrich Sieggruen in Germany in the 1920s. Witte first noticed that four points in space appeared to behave in every way the same as planets, although no physical bodies had been actually found there. Later, Sieggruen identified four more points. Some suppose that the TNPs (as

Astrology

they are called for short) could be mathematical points, like nodes, that reflect combinations of energies. No one really knows, but it can be said that after nearly a century of observation of the points in space, Uranian astrologers are convinced of their validity, and have verified consistent patterns in how to interpret their meaning. This volume is provided for ease of use in quickly scanning for the positions of each of the eight TNPs over lengthy periods of past history and also for projecting into the future. The introductory text in the book provides keyword interpretations for the TNPs and a resource guide for where instructional and interpretive books, tools and materials can be found.

I have been doing astrological readings for some forty-plus years. Back in the day, my most-used book was a little volume by Hugh McCraig called the "200-Year Ephemeris," which basically was a list of geocentric planets giving the planet positions at the first of each month. When I did a reading with a client, this was the book I reached for to see where Saturn or other planets today were in the natal chart. With the McCraig book in mind, I wanted to create something similar, but what I also needed were graphic wheels to see at a glance where the planets are in the zodiac and what major aspect patterns are present. The StarTypes Visual Ephemerides do all of this and more. Each month has a 360-degree open chart when with planets and aspect patterns drawn in plus a listing of the Sun, Moon, planets and lunar node by degrees and minutes. Given this information, it is easy to flip through the pages and watch the kaleidoscopic aspect patterns change in the sky - perfect for readings.
