Meaning. In object-oriented programming languages, and other related fields, encapsulation refers to one of two related but distinct notions, and sometimes to the combination thereof: . A language mechanism for restricting direct access to some of the object's components.; A language construct that facilitates the bundling of data with the methods (or other functions) operating on that data.

~~Encapsulation (computer programming) — Wikipedia~~

A programming language can be defined as an artificial language that allows the programmer to communicate with the computer to tell him what he has to do. To this end, man has invented many programming languages, but all of them can be classified into three main types: the machine, low level, and high level.
