summarising the distribution of contaminants in a fluid by counting the particles per 100ml sample of hydraulic fluid: the figures are cumulative .

Guide to Contamination Standards - Parker Hannifin

All standards are in counts per volume, and provide easy methods for converting particle counts into limits that are simple to interpret. By noting the requirements of the standard, particle counts can be accurately converted to contamination levels. 3

Committees responsible for fluid power (ISO/TC131/SC6) have recently introduced new standards for the measurement and assessment of fluid cleanliness (Table 1). While primarily developed for fluid power, the new standards are equally applicable to the lubricating oil sector.

There are many standards for HEPA filters. Intended to provide clarity in this maze of standards, ISO 29463 is derived from EN 1822, which defines the EPA, HEPA and ULPA filter classes commonly found in industrial use. ISO 29463 maintains the filter designations EPA, HEPA and ULPA while replacing filter classes E10-E12, H13-H14 and U15-U17 with the following 13 filter classes:

these lists of certified products based on the contaminants we get the most enquires about. Keep in mind that if a filter type is not listed, it is likely that there are no systems of that type certified to reduce that specific contaminant.

Contaminant Reduction Claims Guide | NSF International

Critical contamination situations demonstrate the importance of dispenser filtration. By trapping particulate and other contaminants, and by slowing the flow of fuel to alert operators to the presence of phase separation, dispenser filters are the last line of defense against the distribution of contaminated fuel.

The ISO cleanroom standards are intended to cover all relevant aspects of contamination and bio-contamination control technology. For their development, the following general guidance principles have been agreed: - The series of standards to be developed shall address only subjects of general applicability to all cleanroom usage areas.

The ISO contamination control standards - HVDS | Air Filters
NSF International external icon is an independent organization that develops public health standards for products. One way to figure out what a water filter does is to look for an NSF certification on the label. You can look up specific products in the NSF database external icon online to see what they are certified to protect
