It is an essential read and necessary companion-handbook for everyone involved in the metalforming industry from the steel mill through to service centers and right down to the fabricator. Operational as well as sales people will benefit from the knowledge and be brought up to date with current practises and thought on this subject in especially Northern America.

Book Description. Reflecting hands-on experience of materials, equipment, tooling and processes used in the industry, this work provides up-to-date information on flat-rolled sheet metal products. It addresses the processing and forming of light-to-medium-gauge flat-rolled sheet metal, illustrating the versatility and myriad uses of this material.

Handbook of Metal Forming Process by Darren Wang ...

Abstract. This book is essentially a collection of metal-forming processes. It provides studies of the modes of deformation in the workpiece and the external forces. Includes discussion of tool design and its geometrical parameters. Only light coverage is given the design of the machines and their operation. Contents: Forging.

METAL FORMING

Metal forming: Large set of manufacturing processes in which the material is deformed plastically to take the shape of the die geometry. The tools used for such deformation are called die, punch etc. depending on the type of process. Plastic deformation: Stresses beyond yield strength of the workpiece material is required. Categories: Bulk metal forming, Sheet metal forming

This volume addresses all methods of sheet metal fabrication technologies, selection of equipment and die materials, specification of forming practices for specific alloys, and new techniques for process design and control. It provides practical reference information on the basic processes of press forming, drawing, bending, spinning, shearing, blanking, and piercing of sheet with additional coverage on forming with bar, tube, wire, shapes, or long parts.

This Metal Forming Handbook has been fundamentally revised to take account of these technological changes. It is both a text book and a reference work whose initial chapters are concerned to provide a survey of the fundamental processes of forming technology and press design.

Metal Forming Handbook | Schuler GmbH | Springer

Forming, metal forming, is the metalworking process of fashioning metal parts and objects through mechanical deformation; the workpiece is reshaped without adding or
