Drives with MDD AC servo motors are especially well-suited for use in tool, textile, printing and packaging machines, as well as robotics, handling equipment and transfer facilities. MDD motors assure high contouring accuracies at high feedrates, in particular when used for cutting in high speed ranges.

Liquid-cooled MDD servo motors are protected by their housing and covers as per DIN VDE 0470, section 1 (edition dated 11/92) against:

- contact with live or moving parts
- penetration by objects and water

The protection categories are indicated in terms of the letters IP (International Protection) and two digits for the grade of protection.

Indramat parts and components were built to last for a long, long time. All Indramat components are now considered legacy parts, meaning that they are no longer manufactured. Although these components haven't been made in over a decade, there are still many systems that are using Indramat servos.

~~Indramat Manual—Indramat Products~~
Indramat continued as the electric drive division and the company built the first hydraulic servo valves in 1972. In 1979, Indramat revolutionized electric servo motors with their brushless AC motor. Other Indramat innovations included personality modules, which let users of Indramat modules plug in the programming for their devices quickly. That and their modular design meant that companies
