Mitsubishi L200 pickup review (2006-2015) | Parkers

Whichever L200 model you choose, and there are quite a few of them, there's a 2.5-litre common-rail injection diesel engine up front doing the hard work. In standard form, this engine turns in a healthy 134bhp and torque of 314Nm at 2,000rpm but a high power option tickles the output up to a macho 174bhp with 400Nm at 2,000rpm in manual form.

The 2.5-litre turbocharged and intercooled diesel engine that most customers will

The Global Financial Crisis has re-ordered how the EU intervenes in the EU financial market, both with respect to regulation and with respect to supervision. After 5 years of a behemoth reform agenda, the new landscape is now clear. Rule-making power has decisively moved to the EU and radical reforms have been made to the organization of supervision. EU Securities and Financial Markets Regulation provides the first comprehensive, critical, and contextual account of the vast new rule-book

which now applies to the EU financial market in the aftermath of the seismic reforms which have followed the financial crisis. Topics covered in-depth include the AIFMD, EMIR, the Short Selling Regulation, the new market abuse and transparency regimes, the rating agency regime, the UCITS IV-VI reforms, and MiFID II/MiFIR; the analysis is wide-reaching, extending to secondary legislation and relevant soft law. The book also examines the far-reaching institutional changes which have followed and considers in detail the role and impact of the European Securities and Markets Authority and the potential impact of the Single Supervisory Mechanism for euro area banks on the supervision of the EU financial market. EU Securities and Financial Markets Regulation is the third edition of the highly successful and authoritative monograph first published as EC Securities Regulation. Almost entirely recast and re-written from the 2008 second edition to reflect the changes wrought by the Global Financial Crisis, it adopts the in-depth contextual and analytical approach of earlier editions and so considers the market, political, international, institutional, and constitutional context of the new regulatory and supervisory regime, and the underlying forces which have (and will continue to) shape it.

Building on the strength of previous editions, the fourth edition presents a well-conceived, clearly stated analysis of complex issues confronting law enforcement officers and administrators. Law enforcement duties sometimes place police officers

in vulnerable positions regarding their legal obligations and expose them to charges of misconduct. Civil liability is an extremely expensive proposition for police officers, law enforcement agencies, governments, and ultimately taxpayers. Although substantial resources are often expended by the justice system to resolve liability cases, there are benefits to citizens. When the government assumes the responsibility to provide service or to protect the public, people injured by inadequate performance of those responsibilities deserve compensation; innocent parties who suffer injury should have an avenue for redress. The potential for litigation has been an impetus for better training and more responsible practices. Another excellent resource on the topic, Kappeler's edited volume of Supreme Court cases, *Police Civil Liability, Second Edition*, allows students to understand firsthand the legal reasoning behind Court decisions dealing with these same issues.

This volume is part of the Ceramic Engineering and Science Proceeding (CESP) series. This series contains a collection of papers dealing with issues in both traditional ceramics (i.e., glass, whitewares, refractories, and porcelain enamel) and advanced ceramics. Topics covered in the area of advanced ceramic include bioceramics, nanomaterials, composites, solid oxide fuel cells, mechanical properties and structural design, advanced ceramic coatings, ceramic armor, porous ceramics, and more.

Pollution Control for Agriculture is a substantial revision of the "Agricultural Waste Management" book that discusses the implications and possible management systems for crop production. This 14-chapter text also provides the basic information needed to understand the concern on pollution from agricultural wastes. Agricultural wastes are defined as the excesses and residues from the growing and first processing of raw agricultural products, such as fruits, vegetables, meat, poultry, fish, and dairy products. The introductory chapters deal with the influence of legal constraints and changing agricultural practices on the environmental problems associated with agricultural production. The following chapter focuses on the characteristics of food processing wastes and animal wastes. The remaining chapters are devoted to the fundamentals, principles, and benefits of various waste management processes and treatment systems, including biological and biochemical processes, ponds and lagoons, oxygen transfer, aerobic, anaerobic, physical and chemical treatments, nitrogen control, and land disposal. This book is of great value to food agricultural producers, scientists, and engineers who are interested in knowing and applying feasible agricultural waste management concepts and approaches.

"Receptors," Berlin, December 7 to 9, 1970 is a collection of papers presented at the Schering Workshop on Steroid Hormone "Receptors," held in Berlin, Germany, on December 7-9, 1970. Contributors review research findings concerning steroid hormone receptors and cover topics organized around receptors of estrogen, androgen, progesterone, aldosterone, and corticosteroids. This book is comprised of 20 chapters and begins by analyzing the concentration of the estrogen binding protein in the rat uterus in three stages of uterine development, followed by a discussion on estradiol binding in mammalian tissues. The next section explores androgen receptors and includes chapters dealing with the specific binding of steroid-receptor complexes to DNA as well as the effects of androgen receptors on rat and human prostate. Subsequent chapters discuss the action of progesterone, aldosterone, and corticosteroid receptors. This monograph will be of interest to biochemists, biologists, and physiologists.
