How did somebody come up with the idea for bridges, skyscrapers, helicopters, and nightlights? How did people figure out how to build them? In *3D Engineering: Design and Build Your Own Prototypes*, young readers tackle real-life engineering problems by figuring out real-life solutions. Kids apply science and math skills to create prototypes for bridges, instruments, alarms, and more. Prototypes are preliminary models used by engineers—and kids—to evaluate ideas and to better understand how things work. Engineering design starts with an idea. How do we get to the other side of the river? How do we travel long distances in short times? Using a structured engineering design process, kids learn how to brainstorm, build a prototype, test a prototype, evaluate, and re-design. Projects include designing a cardboard chair to understand the stiffness of structural systems and designing and building a set of pan pipes to experiment with pitch and volume. Creating prototypes is a key step in the engineering design process and prototyping early in the design process generally results in better processes and products. *3D Engineering* gives kids a chance to figure out many different prototypes, empowering them to discover the mechanics of the world we know.

Tip 27 You can insert custom messages in employee pay stubs! If you're running the in-house payroll functionality in SAP ERP HCM, you can send custom messages to specific employees via their payroll stubs. Whether you want to explain a payment or deduction, note changes in payroll contact information, or acknowledge service anniversaries, it only takes a few clicks to add a personal note. Find out more on page 76!
