these incentives can advance a wide range of policy objectives (increasing employment, promoting sustainability, and reducing inequality). Yet since design and implementation are complicated, incentives have been associated with rent-seeking and wasteful public spending. This collection illustrates the different types and uses of these initiatives worldwide and examines the institutional steps that extend their value. By combining economic analysis with development impacts, regulatory issues, and policy options, these essays show not only how to increase the mobility of capital so that cities, states, nations, and regions can better attract, direct, and retain investments but also how to craft policy and compromise to ensure incentives endure.

This report reviews five types of property tax incentives and examines their characteristics, costs, and effectiveness: property tax abatement programs; tax increment finance; enterprise zones; firm-specific property tax incentives; and property tax exemptions in connection with issuance of industrial development bonds. Alternatives to tax incentives should be considered by policy makers, such as customized job training, labor market intermediaries, and business support services. State and local governments also can pursue a policy of broad-based taxes with low tax rates or adopt split-rate property taxation with lower taxes on buildings than land.

Increased investment in agriculture and food systems—from both the private and public sectors—is critical to enhance food security and nutrition, reduce poverty, and adapt to climate change. To generate sustainable benefits, this investment must be responsible. What role should investment incentives play in encouraging such investment? This Guide helps to answer that question. Specifically, the Guide provides policymakers and government technical staff with guidance on how investment incentives can be used (and how they should not be used) to enhance responsible investment in agriculture and food systems. The Guide provides an overview of responsible investment in agriculture and food systems; examines common types of incentives; offers general considerations on how incentives can be used; and discusses how to plan for, design, monitor, and evaluate investment incentives for responsible investment in agriculture and food systems.

This open access volume addresses the link between international taxation, the 2030 Sustainable Development Agenda and the medium-term revenue strategy (MTRS) concept. It also analyses how countries and governments can reinforce this link in current and future initiatives in international taxation, including the base erosion profit shifting project (BEPS) initiated by the OECD with the political mandate of the G20. It discusses the 2030 Sustainable Development Agenda that are relevant for taxation and assesses the current work done by international organizations, regional tax organizations and countries to achieve these SDGs. The contributions to this volume provide an interdisciplinary mix of expertise in tax law, international political economy, global governance and international relations. Through these different perspectives, this volume provides an elaborate reference and evaluation framework for multilateral cooperation on tax and development to strengthen the revenue system of developed and developing countries. This topical volume is of interest to students and researchers of the social sciences, law and economics, as well as policy makers working on taxation.

Measures that empower young agri-entrepreneurs should be a key component of a sustainable development-centred investment promotion strategy. The very realization of future generations' food security, the sustainable transformation of food systems and the combat against unemployment and distress migration all depend upon the successful

Read Free Rethinking Investment Incentives Trends And Policy Options

implementation of strategies that make the agri-food sector more attractive for the youth. This, in turn, requires smart policy responses that will help young investors overcome the numerous barriers they face – access to finance, land, information and technical services, to name but the most crucial ones. Since 2017, FAO has provided support to African and South-East Asian countries in identifying key challenges for young agri-entrepreneurs and good practices through participatory capacity analyses and strategic planning processes which were carried out with, and for the youth. This report summarizes the main findings and lessons learned from FAO ' s work with eleven African countries – Côte d ' Ivoire, Guinea Conakry, Malawi, Mali, Mauritania, Mozambique, Namibia, Senegal, South Africa, Tunisia and Uganda. It identifies key challenges and policy recommendations regarding youth ' s access to finance; land; technical services and information; as well as the engagement of youth in policy-making processes. The report also contains a set of five overall key policy recommendations for the empowerment of young agri-entrepreneurs.

Policies targeting individual companies for economic development incentives, such as tax holidays and abatements, are generally seen as inefficient, economically costly, and distortionary. Despite this evidence, politicians still choose to use these policies to claim credit for attracting investment. Thus, while fiscal incentives are economically inefficient, they pose an effective pandering strategy for politicians. Using original surveys of voters in the United States, Canada and the United Kingdom as well as data on incentive use by politicians in the US, Vietnam and Russia, this book provides compelling evidence for the use of fiscal incentives for political gain and shows how such pandering appears to be associated with growing economic inequality. As national and subnational governments surrender valuable tax revenue to attract businesses in the vain hope of long-term economic growth, they are left with fiscal shortfalls that have been filled through regressive sales taxes, police fines and penalties, and cuts to public education.

Multinational Enterprises and the Law is the only comprehensive, contemporary, and interdisciplinary account of the techniques used to regulate multinational enterprises (MNEs) at the national, regional, and multilateral levels. In addition, it considers the effects of corporate self-regulation, and the impact of civil society and community groups upon the development of the legal order in this area. The book has been thoroughly revised and updated for this third edition, making it a definitive reference work for students, researchers, and practitioners of international economic law, business, corporate and commercial law, development studies, and international politics. Split into four parts, the book first deals with the conceptual basis for MNE regulation. It explains the growth of MNEs, their business and legal forms, and the relationship between them and the effects of a globalised economy and society upon the evolution of regulatory agendas in the field. Part II covers the main areas of economic regulation, including the limits of national and regional jurisdiction over MNE activities, controls over, and the liberalisation of, entry and establishment, tax, company and competition law and the impact of intellectual property rights on technology diffusion and transfer. Part III introduces the social dimension of MNE regulation covering labour rights, human rights, and environmental issues. Finally, Part IV deals with the contribution of international investment law to MNE regulation and to the control of investment risks, covering the main provisions found in international investment agreements, their interpretation by international tribunals, and how concerns over these developments are leading to reform proposals.

The role of foreign direct investment initiatives is pivotal to effective enterprise development. This is particularly vital to emerging economies that are building their

presence in international business markets. Outward Foreign Direct Investment (FDI) in Emerging Market Economies is a comprehensive source of academic material on the progressive impact of investment opportunities in the context of developing nations. Highlighting pivotal research perspectives on topics such as trade, sourcing strategies, and corporate social responsibility, this book is ideally designed for academics, practitioners, graduate students, and professionals interested in the economic performance of emerging markets.

The 30th edition of the World Investment Report looks at the prospects for foreign direct investment and international production during and beyond the global crisis triggered by the COVID-19 (coronavirus) pandemic. The Report not only projects the immediate impact of the crisis on investment flows, but also assesses how it could affect a long-term structural transformation of international production. The theme chapter of the Report reviews the evolution of international production networks over the past three decades and examines the configuration of these networks today. It then projects likely course changes for the next decade due to the combined effects of the pandemic and pre-existing megatrends, including the new industrial revolution, the sustainability imperative and the retreat of laissez faire policies. The system of international production underpins the economic growth and development prospects of most countries around the world. Governments worldwide will need to adapt their investment and development strategies to a changing international production landscape. At the request of the UN General Assembly, the Report has added a dedicated section on investment in the Sustainable Development Goals, to review global progress and propose possible courses of action.

Increasing international investment, the proliferation of international investment agreements, domestic legislation, and investor-State contracts have contributed to the development of a new field of international law that defines obligations between host states and foreign investors with investor-State dispute settlement. This involves not only vast sums, but also a panoply of rights, duties, and shifting objectives at the juncture of national and international law and policy. This engaging Research Handbook provides an authoritative account of these diverse investment law issues.
