This book introduces and analyzes the models for engineering leadership and competency skills, as well as frameworks for industry-academia collaboration and is appropriate for students, researchers, and professionals interested in continuous professional development. The authors look at the organizational structures of engineering education in knowledge-based economies and examine the role of innovation and how it is encouraged in schools. It also provides a methodological framework and toolkit for investigating the needs of engineering and technology skills in national contexts. A detailed empirical case study is included that examines the leadership competencies that are needed in knowledge-based economies and how one university encourages these in their program. The book concludes with conceptual modeling and proposals of specific organizational structures for implementation in engineering schools, in order to enable the development of necessary skills for future engineering graduates.

There was much development of both education and industry in post-World War II Britain. There was, on the one hand, an extension of public education to the secondary school stage and the substantial financial help that was available, which meant that increasing numbers were going to university. On the other, there had been immense advances in scientific and technical knowledge and its application to industry. These advances in industry produced an increase in the demand for trained graduates. This book, first published in 1957, examines this correlation, and provides guidance for both graduates and hiring managers. This title will be of interest to students of human resource management and business studies.

This text covers the development of decision theory, offering extensive examples and illustrations that cultivate students' appreciation for applications: strength of materials, soil mechanics, construction planning, water-resource design, and more. 1970 edition.

Few empirical studies of Arab countries have dealt with political culture and political socialisation or focused on people's beliefs, values, and attitudes towards the government or political leaders, mainly because the regimes have been reluctant to allow opinion to be tested. The significance of this book is that it assesses the influence of state ideology on the new generation of Libyans, and examines their political culture.
