Consider the following block diagram of closed loop control system, which is having nonunity negative feedback. We can find the steady state errors only for the unity feedback systems. So, we have to convert the non-unity feedback system into unity feedback system.

Control Systems - Steady State Errors - Tutorialspoint

Note: The @-operator works only on expressions.A simple rule of thumb is: if you can take the value of something, you can prepend the @ operator to it. For instance, you can prepend it to variables, function and include calls, constants, and so forth. You cannot prepend it to function or class definitions, or conditional structures such as if and foreach, and so forth.
