The term universal algebra is used for structures with no relation symbols. Model theory has a different scope that encompasses more arbitrary theories, including

Mathematical formalisms that permit a rigorous description of quantum mechanics. This mathematical formalism uses mainly a part of functional analysis, especially Hilbert space which is a kind of linear space. Such are distinguished from mathematical formalisms for physics theories developed prior to the early 1900s

The complete theory of a structure A is the set of all first-order sentences over the signature of A which are satisfied by A . It is denoted by $\text{Th}(A)$. More generally, the theory of K , a class of \mathcal{L} -structures, is the set of all first-order \mathcal{L} -sentences that are satisfied by all structures in K , and is
