This book provides up-to-date information on bioinformatics tools for the discovery and development of new drug molecules. It discusses a range of computational applications, including three-dimensional modeling of protein structures, protein-ligand docking, and molecular dynamics simulation of protein-ligand complexes for identifying desirable drug candidates. It also explores computational approaches for identifying potential drug targets and for pharmacophore modeling. Moreover, it presents structure- and ligand-based drug design tools to optimize known drugs and guide the design of new molecules. The book also describes methods for identifying small-molecule binding pockets in proteins, and summarizes the databases used to explore the essential properties of drugs, drug-like small molecules and their targets. In addition, the book highlights various tools to predict the absorption, distribution, metabolism, excretion (ADME) and toxicity (T) of potential drug candidates. Lastly, it reviews in silico tools that can facilitate vaccine design and discusses their limitations.

From the factory to the road, browse through more than 170 cool cars--from hatchbacks to hybrids--in DK's Pocket Genius: Cars. Trace the history of the automobile from early vintage cars to modern concept cars, limousines to coupes, and minivans to sports cars in this reference guide perfect for children ages 8-12. Catalog entries include facts provided at-a-glance information, while locator icons offer immediately recognizable references to aid navigation and understanding, and fact files round off the ebook with fun facts such as record breakers and timelines. Each mini-encyclopedia is filled with facts on subjects ranging from animals to history, cars to dogs, and Earth to space and combines a child-friendly layout with engaging photography and bite-size chunks of text that will encourage and inform even the most reluctant readers.

An engaging tale – written in verse – about a handsome African Grey Parrot, Nebuchadnezzar the Third, and his unlikely playmate, Belinda – a bright and busy bee. Nebuchadnezzar lives in the deep jungles of Africa and comes to rich and colourful life when he takes to the air, showing off his splendid plumage as he swoops and dives with his fellow fliers. But every young creature needs a playmate and some fun, and this is where Belinda the Bee comes in. She ' s Nebuchadnezzar's good friend, and after a day ' s work they join together to play jungle hide-andseek. Lots of laughs and giggles later, they settle down for a good ' s night ' s sleep. Claire Norden ' s now familiar style of illustration is cheerful and bright, and holds great appeal for young readers.

Expert Sudoku is an all-new collection of handcrafted puzzles for the expert puzzle-solver. This is the book that challenges skilled solvers and Sudoku-lovers at the top level—every one of the 320 puzzles is

rated "difficult." Good luck!

The second edition of Minimally Invasive Bariatric Surgery provides a comprehensive, state-of-the-art review of this field, and it serves as a valuable resource for clinicians, surgeons and researchers with an interest in minimally invasive bariatric surgery. Additionally, the second edition includes new features that will benefit the resident, fellow, or bariatric surgeon new to the field. Specifically, each evidence-based chapter (i.e. outcomes, complications, epidemiology, etc) concludes with three or four exam questions that emphasize the salient points of the chapter and provide fellowship programs a valuable training tool and resource for their academic curriculum. These questions are either single-answer multiple choice or true/false format and the correct response with a brief explanation follows. As more emphasis is placed on completing a comprehensive curriculum and obtaining certification for bariatric training, this aspect of the book is unique and provides added value to the text. The new edition also incorporates many new or updated medical illustrations to enhance the technique chapters and provide more uniformity for the artwork throughout the book. Each of the major procedures include surgical technique, outcomes, and management of complications in separate chapters to provide an easy reference for the busy clinician preparing for a case or presentation. Another unique feature of the text is a link to video files hosted online for the relevant chapters. This video library will be of great value to the user. As the number of fellowships in laparoscopic bariatric surgery continues to increase, this updated text will provide a valuable resource for general and bariatric surgeons, laparoscopic surgeons, fellows, residents, medical students, obesity researchers, and industry representatives involved in this field.

(Guitar Solo). If you're looking for a comprehensive collection of the best classical guitar repertoire, this

is it! Each piece is written in standard notation (no tab) and includes essential right- and left-hand fingerings. This collection includes compositions by J.S. Bach, Augustin Barrios, Matteo Carcassi, Domenico Scarlatti, Fernando Sor, Francisco Tarrega, Robert de Visée, Antonio Vivaldi and many more.

"I've been in Florence for now two days, still brutally jet-lagged. I keep waking up at a 4 or 5 in the morning. These have been slow, long days. Already a pace aggressively different than the last few weeks in LA for me. It feels good though. There's a kind of whiplash, still reeling from the absurd, unnecessary non-stop-ness of my end-of-semester weeks in late April/early May. Many things to learn from, which is why it feels so good to be here. And why I write to you now, not simply because it's been far too long, but also because you are an inspiration! I cannot help but think about your travels and yes, your wisdom, when reeling slowly and pleurably, freshly here in Tuscany." --Erik Benjamins, *Butts of Florence*

In 2006, Erik Benjamins, a Los Angeles-based artist, spent six months in Florence, Italy as an American student abroad. Eight years later, in 2014, he returned for six weeks to teach, walk, watch, think, eat, and learn. *Butts of Florence*, published now for the first time by No Style Press, is a collection of writing and photographs taken during this six-week stay. Formally stunning black and white photographs of the butts of various Florentine sculptures punctuate writing that adopts the forms of diaristic entries, appropriated letter writing, travel guide tips, restaurant reviews, and poetic prose. Together, text and image build the arc of a humorous, hungry, critical, introspective, romantic, and grateful visitor to one of the most storied cities in history." This compact volume packs a punch--the perfect literary companion for a jaunt

to Italy. A game changer." --Dr. Anthony Martin, molecular biologist and director of PATAO

The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia, in which groups of leading scientists from a range of topics across biology, chemistry and medicine assembled to present papers and discuss results. The Novartis Foundation, originally known as the Ciba Foundation, is well known to scientists and clinicians around the world.

Fundamentals and Applications of Nanophotonics includes a comprehensive discussion of the field of nanophotonics, including key enabling technologies that have the potential to drive economic growth and impact numerous application domains such as ICT, the environment, healthcare, military, transport, manufacturing, and energy. This book gives readers the theoretical underpinnings needed to understand the latest advances in the field. After an introduction to the area, chapters two and three cover the essential topics of electrodynamics, quantum mechanics, and computation as they relate to nanophotonics. Subsequent chapters explore materials for nanophotonics, including nanoparticles, photonic crystals, nanosilicon, nanocarbon, III-V, and II-VI semiconductors. In addition, fabrication and characterization techniques are addressed, along with the importance of plasmonics, and the applications of nanophotonics in devices such as lasers, LEDs, and photodetectors. Covers electrodynamics, quantum mechanics and computation as these relate to nanophotonics Reviews materials, fabrication and characterization techniques for nanophotonics Describes applications of the technology such as lasers, LEDs and photodetectors
