PDF Viruses

A difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces. Bacteria are intercellular organisms (i.e. they live in-between cells);

Download File

PDF Viruses

whereas viruses are intracellular organisms (they infiltrate the host cell and live inside the cell).

PDF Viruses

Guide Bacteria

Viruses are packets of nucleic acid with either DNA or RNA. Outside a host cell, a virus is dormant and it is only after it enters a host cell and uses its metabolic machinery to produce copies of itself it is able to burst out of

Download File

infected cells.

Bacteria carry a single circular molecule of DNA that encodes the essential genes for reproduction.
