Understanding Plants - Part I: What a Plant Knows | Coursera
A plant needs to know if another plant has grown above it, filtering out the light for photosynthesis. If a plant senses that it is in the shade, it will start growing faster to get out. And plants need to survive, which means they need to know when to "hatch" out of their seeds and when to reproduce.

What a Plant Knows: A Field Guide to the Senses: Updated ...
Plants can hear--and taste things, too! Thoroughly updated from root to leaf, this revised edition of the groundbreaking What a Plant Knows includes new revelations for lovers of all that is vegetal and verdant. The renowned biologist Daniel Chamovitz builds on the original edition to present an intriguing look at how plants themselves experience the world--from the colors they see to the schedules they keep, and now, what they do in fact hear and how they are able to taste.
