There is renewed interest in the Moon in recent years, with the news
that a Chinese lunar rover landed on the Moon in January 2014, and
NASA announcing that it is looking for private partners to land a
robot on the Moon's surface, as the first step in a programme to
exploit the commercial opportunities offered by the Moon. Recent lunar
expeditions by both orbiting spacecraft and 'landers' have uncovered
far more detail about the Moon's surface and geology, including the
trail of Neil Armstrong's first walk on the Moon in 1969. This manual
explains in simple and straightforward terms, with a wealth of
illustrations and photographs, what we have discovered about the Moon
over the centuries, along with a general overview of the vehicles
involved in the exploration.
